When it comes to water conservation, another drop in the bucket does make a difference

Check out these simple ways to save water!

5/7

Why should we conserve water?

- Utah is the second driest state in the country, only receiving an average of 19.5 inches of precipitation state-wide per year
- The population of Utah is expected to double by the year 2060
- The cheapest and least invasive way to sustain population growth is by conserving water

Visit prepare60.com for more information

What is an irrigation system audit?

This audit evaluates the efficiency of your sprinkler system, which will provide you with a recommended run time and watering interval according to the catch cup volumes and the type of soil in your yard.

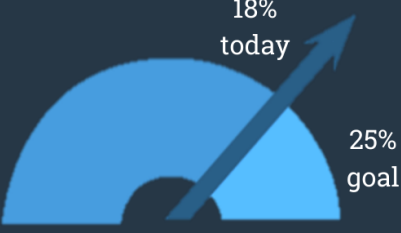

Residents that use secondary water can pick up a free set of catch cups from the Bountiful Irrigation District, residents using culinary water can be loaned a set of catch cups from the Bountiful City Water Department
